

When **Pride® Mobility** introduced its patented **EZ Turn** technology, it established a new industry standard. For the first time, users could experience true **3-wheel turning ability** while maintaining **4-wheel stability**.

We're thrilled to announce that **EZ Turn** is now a major feature of the **Go Go® Sport 4-Wheel**, which becomes the latest scooter to receive this exclusive technology.

Everything that has made the Go Go Sport a popular travel mobility scooter remains, but its **turning radius** has been reduced to **just 41.5"**, a dramatic **improvement of 18%** from the previous turning radius of 50.5".

This can make a **huge difference** in the lives of your customers throughout all their travels and daily activities. They'll have **greater confidence** in navigating tight environments with the **peace of mind** of knowing they still have the stability of four wheels. It truly is the **best of both worlds!**

By expanding the **EZ Turn** collection, we strive to offer your customers more ways to experience this **revolutionary** technology to help them live their best. Contact your Pride Sales Representative to learn more about the **Go Go Sport 4-Wheel!**
